

EXF1 the first ventilation opening is disposed under the main body and between a grouping of contacts adapted for electrical connection to the mother board to provide air to flow between the mother board and the electronic module.

6. (Thrice Amended) A connector for connecting a mother board and a plate-like electronic module with electrical conductive pads at an end part, comprising a housing, a ventilation opening and wall members, wherein

the housing is mounted on the mother board and provided with a main body and a pair of arms,

the main body has one end adapted for electrical connection to the mother board and an opposite end adapted for electrical connection with the electrical conductive pads of the electronic module,

the pair of arms extend from ends of the main body to secure the electronic module above the mother board a predetermined distance when the electrical conductive pads of the electronic module are connected to the contacts,

the ventilation opening is disposed under the main body and between a grouping of contacts adapted for electrical connection to the mother board to provide air to flow between the mother board and the electronic module,

the wall members are provided under said pair of arms.

71 11. (Twice Amended) A connector according to Claim 6, wherein said contacts comprise front contacts and rear contacts extending downward from front and rear portions of said main body across said ventilation opening, and said front contacts and said rear contacts each have a streamline section toward an air flowing direction.

12. (Twice Amended) A connector according to Claim 6, wherein said contacts comprise front contacts and rear contacts and rear contacts extending downward from front and rear portions of said main body across said ventilation opening and are provided with closure members to close space between said front contacts and said rear contacts.

13. (Twice Amended) A connector according to Claim 6, wherein said contacts comprise front contacts and rear contacts extending downward from front and rear portions of said main

ES 41 body across said ventilation opening and dustproof members are provided for said front and rear contacts.

15. (Twice Amended) A connector for connecting a mother board and a plate-like electronic module with electrical conductive pads at an end part, comprising a housing, ventilation openings and wall members, wherein

the housing is mounted on mother board and provided with a main body and a pair of arms,

the main body has contacts of which one end is adapted for electrical connection to the mother board and an opposite end is adapted for electrical connection with the electrical conductive pad of the electronic module,

the pair of arms extend from ends of the main body to secure the electronic module above the mother board a predetermined distance when the electrical conductive pads of the electronic module are connected to the contacts,

the ventilation openings in the form of channels are disposed under the pair of arms and provide air to flow between the mother board and the electronic module,

the wall member is provided under the main body.

ES 41 21. (Amended) A connector for connecting a mother board and a plate-like electronic module which has electrical conductive pads at one end of the connector, comprising: a housing with ventilation openings, the housing including a main body and a pair of arms, wherein the main body has contacts of which one end is adapted for electrical connection to the mother board and an opposite end is adapted for electrical connection with the electrical conductive pads of the electronic module, and the pair of arms extend from the main body to secure the electronic module above the mother board by a predetermined distance when the electrical conductive pads of the electronic module are connected to the contacts, the ventilation openings in the form of channels positioned under the pair of arms and provides air to flow between the mother board and the electronic module.

REMARKS

Reconsideration of claims 1-24 is respectfully requested. Claims 1, 6, 11-13, 15 and 21 are amended.

The rejection of claims 1, 2, 6, 11, 15-17, 20 and 21 under 35 USC 102(b) as being
